CAREER OBJECTIVE

Computer Science undergraduate with expertise in full-stack development, Data Structures and Algorithms (DSA), and AI-powered systems. Passionate about solving complex engineering challenges and building scalable, high-impact software solutions. Seeking opportunities to build innovative products at a leading technology company.

EDUCATION

Parul University

Bachelor of Technology (B.Tech) in Computer Science and Engineering — CGPA: 7.5/10

Vadodara, Gujarat

2023 – 2027

PROJECTS

CodeMind AI — Algorithmic Complexity Reviewer | GitHub | Live Demo

2026

Tech Stack: React, Node.js, Express.js, Python, Flask, MongoDB Atlas, Gemini API, AWS Bedrock, JWT, bcrypt, Gunicorn, GitHub Actions

- Developed a full-stack web application that automatically analyzes source code and estimates Big-O time and space complexity using static analysis techniques.
- Architected a **three-tier microservice system** consisting of a React frontend, Node.js API Gateway, and Python analysis service with strict separation of concerns.
- Implemented end-to-end JWT authentication using 7-day tokens and bcrypt with 12 salt rounds, along with route guards, user-scoped MongoDB records, and rate limiting (10 login and 5 registration attempts per IP) to prevent brute-force attacks and unauthorized access.
- Built a Python static analysis engine capable of detecting nested loops, recursion patterns, halving operations, and hash-based structures, accurately mapping code to Big-O time and space complexities across C, Java, and Python.
- Implemented a **three-tier AI fallback mechanism**: Gemini Flash (primary, 10-second timeout) → AWS Bedrock Nova Micro (secondary, 10-second timeout) → offline analysis engine, ensuring uninterrupted service availability.
- Deployed all three services on Render using **Gunicorn (2 workers, 60-second timeout)** for concurrent request handling. Built a React warm-up dashboard with live service health indicators; configured a GitHub Actions keep-alive cron job (every 10 minutes) to eliminate cold-start delays.
- Wrote **12 pytest unit tests** covering all branches of the offline analysis engine, identifying and fixing two production issues. Established a **four-workflow CI/CD pipeline** that deploys services only after all tests successfully pass.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, SQL, HTML, CSS
- **Frameworks & Technologies:** React, Node.js, Express.js, MongoDB, Flask, REST APIs, JWT
- **Tools & Platforms:** Git, GitHub, VS Code, Eclipse, Linux, Render, AWS
- **Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming (OOP), System Design, Competitive Programming

CERTIFICATIONS

- Problem Solving Certificate — HackerRank
- Artificial Intelligence Fundamentals — IBM SkillsBuild
- AWS Academy Graduate: Cloud Foundations — AWS Academy
- Data Structures and Algorithms (Divide & Conquer, Dynamic Programming, Graphs, Backtracking) — Parul University / CodeTantra

ACHIEVEMENTS

- Contributed to open-source projects via GSSoC '26
- Solved 500+ coding problems across platforms including LeetCode, HackerRank, and CodeChef.
